Art Unit: 1762

1. The Request for reconsideration filed 3/21/05 has been considered and entered. Claims 1-10 remain in the application.

2. This application contains claims 5-10 drawn to an invention nonelected with traverse in Paper No. 4. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carey et al. (5,597,469) in combination with either Yeh et al. (5,803,340) or Pierson (5,938,106).

Carey et al. (5,597,469) teaches applying solder through a soldermask to a substrate having solder-wettable pads. The solder is reflowed and solidified to form the contact. Carey et al. (5,597,469) teaches applying solder-wettable material to the soldermask prior to applying the solder thereby forming a soldermask having both solder-wettable areas and non solder-wettable areas. Carey et al. (5,597,469) teaches non-solder wettable metal films such as chromium can be used as mask (16) (col. 6, lines 35-45).

Carey et al. (5,597,469) fails to teach cooling the solder to solidify to solder into a solder ball.

Art Unit: 1762

Yeh et al. (5,803,340) or Pierson (5,938,106) teach cooling applied solder to solidify in solder balls.

Yeh et al. (5,803,340), (abstract, Figs. 1-2 and col. 4, lines 1-10) or Pierson (5,938,106), (abstract, Figs. 3-4 and col. 4, lines 20-30) teach cooling the solder to solidify the solder into a ball.

Therefore, it would have been obvious for one skilled in the art at the time the invention was made to have modified Carey et al. (5,597,469) process by cooling the applied solder as evidenced by either Yeh et al. (5,803,340) or Pierson (5,938,106) with the expectation of achieving similar results.

Response to Amendment

5. Applicant's arguments filed 3/21/05 have been fully considered but they are not persuasive.

Applicants argued that the prior art fails to teach the claimed invention.

The Examiner disagrees as detailed in the rejection above. As noted, the mask (16) can be made of an electrically conductive material such as chromium.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

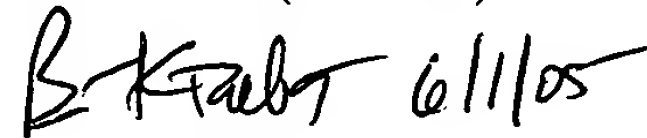

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
